                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Homo sapiens, clone RP11-600K3
                           * NOTE: This is a 'working draft' sequence. It currently consists of 21 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Direct Submission

Work on the sequence is in progress and the release of this data is based on the understanding that the sequence may change as work continues. The sequence may be contaminated with foreign sequence from E.coli, yeast, vector, phage etc. Order of segments is not known; 800 n's separate segments. **NOTE: This is a 'working draft' sequence. It currently
**norsists of 48 contigs. The true order of the pieces
** is not known and their order in this sequence record is
** arbitrary. Gaps between the contigs are represented as
** runs of N, but the exact sizes of the gaps are unknown.
** This record will be updated with the finished sequence
** as soon as it is available and the accession number will
** be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Contig_ID:

This sequence encodes the protein of the invention. The protein of the invention is a beta-2 adrenalin receptor subtype with Kd value of approximately 75 pM against 1251-cyanopindrol. The protein can be used in screening for agonists and antagonists, which are useful in researching asthmatic diseases.

thuringtensis insecticidal proteins
(Claim 1; Page 7; 9pp; Japanese.
Q70084 is a transcriptional control sequence isolated from Bacillus
(huringtensis (Bt) var. israelensis. It can be used for the expression
of Bacillus thuringtensis insecticidal proteins. The isolation of this
sequence allows the development of a host vector system in Bacillus
thuringtensis and creation of highly insecticidal strains. The new
strains created in this way are not recombinants, the insecticidal
proteins produced using Bt as a host can be applied in agriculture.

PT New isolated Helicobacter polynucleotides - used to develop products profer the diagnosis, prevention and treatment of Helicobacter profer the diagnosis, prevention and treatment of Helicobacter profer infections and gastrointestinal diseases

PT New isolated from Helicobacter pylori and encodes a H.pylori GHPO protein. CC infections, and gastroduodenal diseases associated with these confections, including acute, chronic, and atrophic gastritis, and peptic colorer diseases, e.g. gastric and duodenal ulcers. They can also be used for detection and diagnosis.

                                                                                                                                                                                                                                                                                                                                                                                                               PT anti-S.aureus vaccines
PS Claim 1; Page 1956; 3271pp; English.

CC This sequence represents one of 5191 Staphylococcus aureus DNA sequences
CC of the invention. The DNA sequences are recorded on a computer readable
CC medium, preferably selected from a floppy or hard disk, random access
CC memory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using
CC the S.aureus DNA sequences allows putative functions to be assigned so
CC that protein-encoding or regulatory regions of commercial, therapeutic or
CC industrial importance can be obtained. Specifically; sequences which are
CC likely to encode antigens have been identified and these polypeptides can
be used in a vaccine composition against S.aureus infection. The
CC saureus in a sample. S.aureus is implicated in numerous human diseases,
CC including cellulitis, eyelid infections, food poisoning, osteomyelitis,
CC skin and surgical wound infections, scalded skin syndrome, toxic shock
CC syndrome, etc. Organisms transformed with the DNA sequences
CC (and their fragments) are useful as primers or probes for isolating
CC computer readable medium

Stealth virus nucleic acid molecule - useful to detecting stealth virus, e.g. in chronic fatigue syndrome diagnosis

Example 5: Fig I; 82pp; Bnglish.

V10141-V10210 represent nucleic acid sequences obtained from a patient with a stealth virus infection, namely chronic fatigue syndrome (CFS). Such nucleic acid sequences can be used to detect the stealth virus in medical, veterinary and agricultural diagnostics and in industrial and pharmaceutical biological quality control, e.g. to diagnose a disease associated with the stealth virus.

These vaccines and antibodies would protect a host against invasion by S. aureus, and conditions relating to Staphylococcal infection, e.g. Staphylococcal food poisoning, scaled skin syndrome, and toxic shock syndrome.

The present sequence encodes a Staphylococcus aureus protein of unknown function. The present sequence was isolated from a library of clones of S. aureus WCUH 29 in Escherichia coli. The DNA sequence can be used in the construction of ribozymes and antisense sequences to control the expression of Staphylococcal genes. The DNA sequence is also useful as a source of regulatory elements for the control of bacterial gene expression. The encoded protein may be use to produce vaccines to enable a host to produce specific antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  21-AUG-1997.

Stealth virus contained in MRC-5 cell line, ATCC number VR2343 - is useful as a vaccine against chronic fatigue syndrome Disclosure; Fig 1A; 99pp; English.

V11954-V12024 are plasmids which contain fragments of a stealth virus isolated from a patient, D.W. Such stealth virus fragments can be used as vaccine against chronic fatigue syndrome (CFS). This illness causes unexplained fatigue lasting more than 6 months and greater then 50% reduction in an infected persons normal level of activity. The virus causes a cytopathic effect (CFE) to fibroblast cells observed in culture, characterised by the appearance of rounded, slightly enlarged, refractile cells in the culture.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    760567-T60571 represent cotton fibrous tissue genes of the invention. These sequences are specifically expressed during the growth of cotton fibre. The genes were isolated from the polyA RNA of the ovules of a cotton flower of Gossypium barbadense, and G. hirsutum. These sequences, and vectors containing them are used in the preparation of cotton transformants, with improved cotton fibres and improved yield. Sequence 713 BP; 200 A; 131 C; 161 G; 221 T;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/note="Vector: pBluescript SK-; Site_1: EcoRI; CDNA
using Stratagenes 'UniZAP - cDNA synthesis kit'. cDNA
was constructed using an oligo dT primer/linker that
contains a XhoI site within it. Following ds cDNA
synthesis, EcoRI adapters were ligated to the blunt ends
and sample was digested with XhoI. The result is cDNA
synthesis, EcoRI sticky end on one side and a XhoI sticky
end on the other. This cDNA was ligated directionally in
UniZAP arms. The vector is designed containing the
pBluescript sequence as well as lambda DNA and cDNA is
cloned within this pBluescript sequence. The vector was
cloned within this pBluescript sequence. The vector was
cloned within this pBluescript and amplified. The library
was grown in XLIBIUE MRF' cells and amplified. The library
was excised by mass excision using Stratagens 'Mass
was excised by mass excision using Stratagens 'Mass
was excised by mass excision using Stratagens 'Mass
single stranded plasmids that are then packaged (by helper
phage) and secreted out of the host cell as phagemids.
SOLR cells were transformed with phagemids and the library
was plated out on LB-amp plates to select for
transformants. Approximately 1,000,000 colonies were grown
and recovered by using Quiagen Midi prep kit. 2 micro grams of
each library were used to transform DH10B cells by
electroporation."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /note="Vector: pBluescript SK-; Site_1: EcoRI; Site_2: XhoI; Construction of the cDNA library was carried out using Stratagenes 'UniZAP - CDNA synthesis kit'. cDNA was constructed using an oligo dT primer/linker that contains a XhoI site within it. Following ds cDNA synthesis, EcoRI adapters were ligated to the blunt ends and sample was digested with XhoI. The result is cDNA with an EcoRI sticky end on one side and a XhoI sticky end on the other. This cDNA was ligated directionally in UniZAP arms. The vector is designed containing the pBluescript sequence. The vector was cloned within this pBluescript sequence. The vector was then packaged using Gold gigapackaging extracts. Library was grown in XLDBlue MRF' cells and amplified. The library was grown in XLDBlue MRF' cells and applified. The library was excised by mass excision using Stratagens 'Mass excision kit' that uses exassist as a helper phage that releases the pBluescript sequence and circularises it as single stranded plasmids that are then packaged (by helper phage) and secreted out of the host cell as phagemids. SOLR cells were transformed with phagemids and the library was plated out on LB-amp plates to select for transformants. Approximately 1,000,000 colonies were grown and recovered by using Quiagen Midi prep kit. 2 micro grams of each library were used to transform DH10B cells by electroporation."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /db_xref="taxon:3218"
